

Mukut Chowdhury (He/Him)

Email: mukutchowdhury01@gmail.com | **LinkedIn:** linkedin.com/in/mchow2001 | **GitHub:** github.com/mukutchowdhury

I aim to channel my programming expertise and leadership acumen into impactful roles such as Product Management, Solutions Architect, or Cybersecurity Specialist, where I can drive innovation and deliver transformative solutions. I thrive in collaborative, interdisciplinary environments, where I've designed and implemented secure software systems, automated processes to optimize operations, and enhanced cybersecurity protocols to safeguard digital assets. Passionate about advancing security, efficiency, and creativity, I'm eager to leverage my diverse skill set to solve complex challenges and deliver meaningful results

EDUCATION

NYU Tandon School of Engineering, New York, NY

Sept 2024 - May 2026

Master of Science, Cybersecurity GPA: 3.67

NYU Tandon School of Engineering, New York, NY

Sept 2020 - May 2024

Bachelor of Science, Computer Engineering | Minor, Business Studies

SKILLS

Programming/Coding: Java, Python, C++, SQL, HTML, CSS, React.js, JavaScript, Next.js, Node.js

Tools/Skills: Object Oriented Programming, Data Structures & Algorithms, Computer Networking, OpenAI, Pinecone, RAG, GitHub, Stripe, Clerk, Firebase, MongoDB, Vercel, Netlify

EXPERIENCE

Bobby-Tariq Tutoring Center, Queens, NY

July 2019 - Present

Computer Science Instructor, Lead Manager

- Rose from intern to senior leadership in under three years, now overseeing 3+ managers, 15+ employees, and 10+ interns across three locations while spearheading the main branch and guiding performance in satellite branches
- Led the design and development of a dedicated website that cut consumer wait times by 60% in six months through a secure online scheduling system
- Transitioned from manual attendance to a centralized, secure spreadsheet system used by multiple branches, reducing errors and protecting intellectual property while monitoring client usage
- Created and delivered an AP Computer Science curriculum emphasizing secure coding practices and guided students on college admissions, transitioning many into the CAP program
- Collaborated directly with the CEO on strategic decisions, securing over 50 new CAP clients per year and fueling team expansion within the company's first year
- Partnered with local educational institutions to broaden market reach, generate a steady pipeline of prospective clients, and bolster community ties

Apartment Maid, Brooklyn, NY

July 2024 - Present

Fullstack Developer

- Develop a full-stack platform for a cleaning service booking system by enabling seamless appointment scheduling, service selection, and payment integration
- Engineer a responsive checkout system using Next.js, React, Stripe, and MongoDB computing prices depending on service details, taxes, and discount codes, which led to improved checkout speed by 25% and reduced cart abandonment by 15%
- Implement an admin portal that keeps track of user interaction with the live site such as revenue, sales, and subscriptions empowering stakeholders with real-time analytics and actionable insights
- Achieved a 10% increase in revenue and boosted repeat business by enhancing user satisfaction through an optimized platform experience, focusing on user-friendly design, reliable functionality, and personalized features that met customer needs

NYC Department of Consumer and Worker Protection, New York, NY

July 2023 - Nov 2023

Automation Software Engineer

- Tested 50+ consumer protection applications with a 98% bug-detection rate in compliance with cybersecurity standards, significantly increasing online licensing adoption among business owners
- Partnered with developers to address security vulnerabilities and reduce application errors by 15% across 300+ test cases, enhancing overall stability and dependability
- Utilized Selenium in Java to automate over 30 security-focused test cases, boosting the precision and efficiency of testing protocols
- Delivered engaging presentations and clear technical documentation to supervisors, improving communication and facilitating data-driven decisions

NYU Tisch School of the Arts, New York, NY

Aug 2022 - Jul 2023

Cybersecurity Engineer

- Decreased turnaround time by 50% through efficient resolution of hardware, software, and security issues, optimizing service quality
- Implemented robust cybersecurity measures to protect user data and enhance the overall user experience
- Monitored 10+ daily client interactions via ServiceLink, ensuring secure and discreet handling of sensitive requests
- Worked closely with cross-functional teams to strategize automated solutions, integrating key software and cybersecurity insights for improved operational outcomes

ENTREPRENEURIAL PROJECTS

CodeFusionAI

Aug 2024 – Present

Co-Founder

College Genie

- Launched an AI-powered college assistance bot using OpenAI, Clerk, Stripe, Next.js, React, MongoDB, and Retrieval-Augmented Generation (RAG), providing first-time applicants with personalized guidance
- Integrated college recommendations, application tips, and a community portal to boost user engagement and streamline the admission process

CodeFlash

- Developed a flashcard platform for technical interviews and exams, leveraging Gemini, Clerk, Stripe, and Next.js to enable unlimited, customized flashcards
- Introduced premium features that elevated user satisfaction, enhanced engagement, and ensured product scalability

CraveQuest

- Created a restaurant app to combat college food insecurity by offering exclusive deals and coupons, significantly supporting budget-conscious students with an AI-powered chat
- Implemented secure APIs and authentication for data protection, using vector database (Pinecode) and Hugging face embeddings, delivering restaurant recommendations via a user-friendly interface

Simulator

- Engineered an E20 simulator in Python to emulate E20 processor behavior, enabling the execution of machine language programs with precision
- Initialized core processor elements (program counter, registers, and memory) and conducted thorough testing with custom machine language files, ensuring dependable and error-free operation in line with cybersecurity standards
